

Job opening at SHT Smart High Tech AB

Job description

You will be working with the fabrication process of a new type of carbon-based material for heat dissipation applications. The work will require the work in chemical lab with experience on carbon-based materials, especially on processing graphene and/or graphene oxide by using liquid and/or chemical exfoliation, and the reduction of graphene oxide.

Who are we looking for?

- B.Sc/ M.Sc. within one of the following:
Physics/ Chemistry/ Material Science/ Electronics/Mechanics
- Interested in materials development/fabrication
- Ambitious, independent and flexible
- Willing to take initiatives
- Willing to work as part of the team
- Good communication in English

Conditions:

- Full time job. Hands on experience and knowledge in new materials.
- For more information about the company, see www.sht-tek.com
